

NIKKI.AMSTERDAM

THE SEAT

PUMP, ASSEMBLE, SIT BACK AND.. RELAX!

Firm and comfortable

The material (DWF) we have used is very sturdy. A less smooth surface such as a pebble beach is therefore no problem for the chair. We test the material for sturdiness by driving over it with a delivery van. And with success!

A sturdy chair does not mean that it is not a comfortable chair. When designing the chair, we naturally took into account that it should be comfortable to sit in. For example, the seat has a slight curve to the back, allowing you to sit in a relaxed position. In addition, the armrests have been rounded off so that your arms have a comfortable support. The cushions that come with the chair provide even more comfort.
